CARATTERISTICHE DEL MOTORE MOTOR FEATURES

BR O

2A

6A

S4

*Roller ad alto rendimento per elevate prestazioni e durata.
High-performance roller for improved efficiency and life.*

BR E

2A

BS O

6A

S4

*Viti del coperchio posteriore in acciaio ad alta resistenza per sopportare gli sforzi indotti dall'alta pressione.
High resistance stainless steel screws capable of withstanding the stress induced by high pressure.*

Valvole di drenaggio incorporate: ricircolano allo scarico il fluido drenato internamente.

Built in check valves: to relieve case pressure to the low pressure side of the motor.

*Foro drenaggio posteriore per un facile collegamento.
Case drain at rear (shown with plug).*

Parapolvere per proteggere la guarnizione di tenuta dell'albero dalle impurità e guarnizione di tenuta ad alte prestazioni.

Dust seal to protect the high pressure shaft seal from dust and debris.

Valvola distributrice radiale ed albero in un solo pezzo con tolleranze ridotte al minimo per assicurare un drenaggio ridotto.

Spool valve integral to the output shaft of new design features optimizing clearance geometry and so minimizing the oil slippage.

1) Le condizioni intermittenti non devono durare più del 10% ogni minuto. - Intermittent duty must not exceed 10% each minute. 2) Le condizioni di picco non devono durare più del 1% di ogni minuto. - Peak duty must not exceed 1% each minute. 3) I valori tra parentesi si riferiscono alla versione con albero CL250/LC254/SD250. - The values in brackets are referred to CL250/LC254/SD250 shaft. 4) Viscosità dell'olio 37 cSt. - Oil Viscosity 37 cSt. 5) Per impieghi a velocità inferiori o con carichi radiali consultare la Brevini Fluid Power for applications at lower rpm or at high radial loads pls. consult Brevini Fluid Power.

MASSIMA PRESSIONE AMMESSA SULLA GUARNIZIONE ALBERO MAX PERMISSIBLE SHAFT SEAL PRESSURE

Pressione massima di scarico senza drenaggio o massima pressione nella linea di drenaggio. I motori sono forniti nella versione con guarnizioni standard (diagramma Standard) o nella versione con guarnizioni ad alta pressione (diagramma HPS). Per condizioni di pressione e velocità non contemplate dal presente grafico si consiglia di contattare la Brevini Fluid Power.

N.B.: Sulle versioni con Tachimetro o Freno non è possibile installare guarnizioni HPS.

Max. return pressure without drain line or max. pressure in the drain line. Motor are supplied in standard seal version (Standard chart) or in HPS seal version (HPS chart). For pressure and speeds not showed in the curve below, please contact Brevini Fluid Power.

N.B.: Tachometer or Brake versions is not available with HPS seals.

PERDITE DI CARICO PER ATTRAVERSAMENTO PRESSURE LOSS

Il diagramma è stato ottenuto con prove eseguite su un numero significativo di motori, utilizzando un olio avente una viscosità cinematica di 37 cSt alla temperatura di 45° C.

Curve according tests carried out with a relevant number of motors and using hydraulic oil with cinematic viscosity of 37 cSt at 45° C temperature.

CODICI DI ORDINAZIONE ORDERING CODES

Le seguenti lettere o numeri del codice, sono state sviluppate per identificare tutte le configurazioni possibili dei motori BR. Usare il seguente modulo per identificare le caratteristiche desiderate. **Tutte le lettere o numeri del codice devono comparire in fase d'ordine.** Si consiglia di leggere attentamente il catalogo prima di iniziare la compilazione del codice di ordinazione.

The following alphanumeric digits system has been developed to identify all of the configuration options for the BR motors. Use the model code below to specify the desired features. **All alphanumeric digits system of the code must be present when ordering.** We recommend to carefully read the catalogue before filling the ordering code.

Sensor connection M8x1

ATTENZIONE:

- L'alberino contagiri ha velocità pari a 6 volte quella dell'albero primario del motore e senso di rotazione opposto.
- N.B.: Non sono accettati carichi assiali o radiali sull'albero contagiri. Coppia massima trasmissibile 1 Nm.
- Il motore viene fornito senza il sensore elettronico: se necessario, richiederlo in fase di ordinazione.
- Pressione massima ammessa sulla guarnizione dell'albero contagiri con drenaggio chiuso: 25 bar.

WARNING:

- Tacho shaft has a 6 times higher revolution speed than the motor shaft and opposite direction of rotation.
- NOTE: Axial or radial load on tacho shaft must be avoided. Max torque on tacho 1 Nm [0.737 lbf-ft].
- The electronic sensor is not supplied: if required, please state it clearly on order form.
- Max pressure admissible on the shaft seal with closed drain port 25 bar [362.5 psi].

CARATTERISTICHE TECNICHE SENSORE ELETTRONICO
ELECTRONIC SENSOR TECHNICAL FEATURES

Segnale in uscita versione elettronica
Output signal electronic tacho

Numero d'impulsi per giro = 90
Principio di funzionamento induttivo
Funzione di uscita PNP
Tensione nominale 10-65 V d.c.
Caricabilità massima 300 mA
Frequenza massima 10000 Hz
Campo di temperatura -25C +85C
Grado di protezione IP 67

Versioni disponibili:

- Sensore con cavo a tre fili lunghezza 2 metri (cod. 424.0050.0000)
- Sensore con attacco per connettore tipo binder (cod. 424.0060.0000) + connettore tipo binder
- Con cavo a tre fili lunghezza 5 metri (cod. 424.0080.0000)

Number of pulses per revolution = 90
Inductive principle
Output current PNP
Voltage 10-65 V d.c.
Max load 300 mA
Max frequency 10000 Hz
Temperature range -25C +85C
Enclosure IP 67

Available versions:

- Sensor with 2 metres three wires cable (cod. 424.0050.0000)
- Sensor with binder plug connection (cod. 424.0060.0000) + binder connecting plug with 5 metres three wires cable (cod. 424.0080.0000)

1) Drenaggio motore 1/4 G (BSPP) profondità filetto 13mm
1/4 G (BSPP) drain motor thread depth 0.511 in

ATTENZIONE:

- L'alberino contagiri ha velocità pari a 6 volte quella dell'albero primario del motore e senso di rotazione opposto.
- N.B.: Non sono accettati carichi assiali o radiali sull'albero contagiri.

WARNING:

- Tacho shaft has a 6 times higher revolution speed than the motor shaft and opposite direction of rotation.
- NOTE: Axial or radial load on tacho shaft must be avoided.

CARATTERISTICHE FRENO
BRAKE FEATURES

I freni integrati nei motori FP sono freni di stazionamento a sbloccaggio idraulico (freni negativi) e non possono essere impiegati per frenare dinamicamente il carico.

The brakes integrated in FP motors are holding brakes type (negative brake) and cannot be used for dynamic braking action.

Accorgimenti per l'installazione

Installation layout

- Il motore idraulico con freno posteriore FP richiede obbligatoriamente il collegamento del drenaggio motore, posto sul corpo freno, in serbatoio a scarico libero.
- Nel caso di funzionamento in circuito aperto è consigliato l'utilizzo di una valvola di ritardo chiusura freno (per evitare il funzionamento dinamico dello stesso) di una valvola overcentre e di un distributore a centro aperto.

- The FP hydraulic motors must always have the drain port (on casing) directly connected with tank
- If open circuit layout is needed, it is advisable to use a flow control valve on brake piston ports (in order to avoid dynamic braking), on overcentre valve and a open-centre directional valve.

Caratteristiche del motore-freno		Motor-brake features
Pressione di apertura minima	22 bar [319 psi]	Minim release pressure
Pressione di freno libero	25 bar [362.5 psi]	Complete brake release pressure
Pressione massima sul freno	160 bar [2320 psi]	Max. brake pressure
Coppia massimastatica	370 Nm [272.7 lbf-ft]	Max. static torque
Velocità massima motore	350 rpm	Max. motor speed

CARICHI AMMESSI SULL'ALBERO SHAFT LOAD CAPACITY

I carichi ammessi sull'albero variano in funzione di:

- Velocità (n)
- Distanza (L) dal punto di applicazione del carico alla flangia di montaggio
- Versione della flangia di montaggio
- Versione dell'albero

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "2A" ovale 2 fori e "6A" ovale 6 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 2-bolt flange type "2A" and 6-bolt flange type "6A"

	Flangia / Flange 2A	Flangia / Flange 6A
alberi / shafts CL250 LC254 SD250	$Pr = \frac{800}{n} \cdot \frac{250000}{95 + L} \text{ [N]}$	$Pr = \frac{800}{n} \cdot \frac{250000}{95 + L} \text{ [N]}$
alberi / shafts C3175 CL320 CN320		$Pr = \frac{800}{n} \cdot \frac{187500}{95 + L} \text{ [N]}$

Formula valida per $n \geq 200$ rpm
Per $n < 200$ rpm $P_{rmax} = 8000$ N

This formula being valid for $n \geq 200$ rpm
For $n < 200$ rpm $P_{rmax} = 8000$ N [1800 lbf]

The permissible radial shaft load depends on

- Speed (n)
- Distance (L) from the point of load to the mounting flange
- Mounting flange version
- Shaft version

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "S4" 4 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 4-bolt flange type "S4".

	Flangia / Flange S4
alberi / shafts CL250 LC254 SD250	$Pr = \frac{800}{n} \cdot \frac{242000}{97 + L} \text{ [N]}$

Formula valida per $n \geq 200$ rpm
Per $n < 200$ rpm $P_{rmax} = 8000$ N

This formula being valid for $n \geq 200$ rpm
For $n < 200$ rpm $P_{rmax} = 8000$ N [1800 lbf]

La curva mostra la relazione tra (Pr) e (n) quando:

- $L = 30$ mm [1.18 in] per motori flangia 2A e 6A
- $L = 24$ mm [0.95 in] per motori flangia S4

The curve show the relation between (Pr) and (n)

- $L = 30$ mm [1.18 in] for motors with 2A and 6A flange
- $L = 24$ mm [0.95 in] for motors with S4 flange

--- Per alberi C3175-CL320-CN320
For shafts C3175-CL320-CN320
— Per alberi CL250-LC254-SD250
For shafts CL250-LC254-SD250

1) Le condizioni intermittenti non devono durare più del 10% di ogni minuto. Intermittent duty must not exceed 10% every minute.
2) Le condizioni di picco non devono durare più del 1% di ogni minuto. Peak duty must not exceed 1% of every minute.

Pressione massima di scarico senza drenaggio o massima pressione nella linea di drenaggio. I motori sono forniti nella versione con guarnizioni standard (diagramma Standard) o nella versione con guarnizioni ad alta pressione (diagramma HPS). Per condizioni di pressione e velocità non contemplate dal presente grafico si consiglia di contattare la Brevini Fluid Power.

Max. return pressure without drain line or max. pressure in the drain line. Motor are supplied in standard seal version (Standard chart) or in HPS seal version (HPS chart). For pressure and speeds not showed in the curve below, please contact Brevini Fluid Power.

STANDARD (QDR)

HPS

$$Ph = \frac{pi + pr}{2} [bar]$$

ph = pressione in carcassa
pi = pressione di alimentazione
pr = pressione di scarico

ph = housing pressure
pi = inlet pressure
pr = outlet pressure

- La pressione in carcassa senza drenaggio è data dalla media tra *pi* e *pr*.
- Il motore BS è fornito con drenaggio (STANDARD)
- La massima pressione di scarico con drenaggio è di 175 bar

- The case pressure without drain line is the average between inlet and return pressure.
- As standard, BS motors are supplied with drain port (STANDARD).
- Max. permissible return (back) pressure with drain line 175 bar [2540 psi]

Le seguenti lettere o numeri del codice, sono state sviluppate per identificare tutte le configurazioni possibili dei motori BS. Usare il seguente modulo per identificare le caratteristiche desiderate. **Tutte le lettere o numeri del codice devono comparire in fase d'ordine.** Si consiglia di leggere attentamente il catalogo prima di iniziare la compilazione del codice di ordinazione.

The following alphanumeric digits system has been developed to identify all of the configuration options for the BS motors. Use the model code below to specify the desired features. **All alphanumeric digits system of the code must be present when ordering.** We recommend to carefully read the catalogue before filling the ordering code.

Manifold (BFL)

I carichi ammessi sull'albero variano in funzione di:

- Velocità (n)
- Distanza (L) dal punto di applicazione del carico alla flangia di montaggio
- Versione della flangia di montaggio

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "6A" ovale 6 fori. Radial load capacity (Pr) cur ve according to speed (n) and distance (L) from flange, valid for the 6-bolt flange type "6A".

$$Pr = \frac{800}{n} \cdot \frac{242000}{97 + L} \text{ [N]}$$

Formula valida per n >= 200 rpm
Per n < 200 rpm Pmax = 8000 N

This formula being valid for n >= 200 rpm
For n < 200 rpm Pmax = 8000 N [1800 lbf]

The permissible radial shaft load depends on

- Speed (n)
- Distance (L) from the point of load to the mounting flange
- Mounting flange version

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "S4" 4 fori. Radial load capacity (Pr) cur ve according to speed (n) and distance (L) from flange, valid for the 4-bolt flange type "S4".

Formula valida per n >= 200 rpm
Per n < 200 rpm Pmax = 8000 N

This formula being valid for n >= 200 rpm
For n < 200 rpm Pmax = 8000 N [1800 lbf]

La curva mostra la relazione tra (Pr) e (n) quando:

- L = 24 mm [0.95 in] per motori flangia S4 e 6A

The curve shows the relation between (Pr) and (n)

- L = 24 mm [0.95 in] for motors with S4 and 6A flange
