

Hydraulically piloted check valves type HRP

with/without hydraulic pre-relief
manifold mounting

Operating pressure p_{max} = 700 bar

Flow Q_{max} = 400 lpm

1. General information

These valves enable free flow in the one direction but prevent it in reverse direction when the hydraulic release is not actuated either via an external control line or internally via a directly mounted directional seated valve type G..(W..) 3-0 B 0,4 acc. to D 7300 or type WH 1 H(M) acc. to D 7470 A/1. The check valves feature a ball seated design, are made completely made of steel and are suited for mounting onto customer furnished manifolds.

Versions

- Valves without hydraulic pre-relief,
open the full flow cross section area rather quickly when released. They are suited for all standard operation conditions. A throttling section in the control port dampens the switching movement of the releasing piston, which effectively suppresses pressure surges in most cases. When pressure surges show up during initial operation they can be eliminated by installation of an additional orifice which will reduce the opening speed even more (see sect. 3.3).
- Valves with hydraulic pre-relief,
are more suitable for high pressure and larger consumer volumes. A small ball type check valve located in the spherically ground main valve spool, opens up a small annular gap just prior to the main passage is opened, thereby acting like a throttle enabling a bumpless decompression. The effectiveness of this pre-relief i.e. the smoothness of the decompression depends directly on the open-up speed of the control piston. There is a slight leakage between control port Z and leakage port L, because of the missing control piston sealing at type HRP7V. An additional orifice (see sect. 3.3) installed in the control line may be found advantageous in some cases.

Application

- Blockage of zero-leakage cylinders when used together with leakage prone directional spool valves
- Return flow relief for directional valves during retraction of double acting cylinders
- 2/2-way directional seated valve with hydraulic actuation

2. Available versions, main data

Order examples:

HRP 2 - B 0,4

Optional orifice in the control port Z (see sect. 3.2)

HRP 7V - X

3. Additional parameters

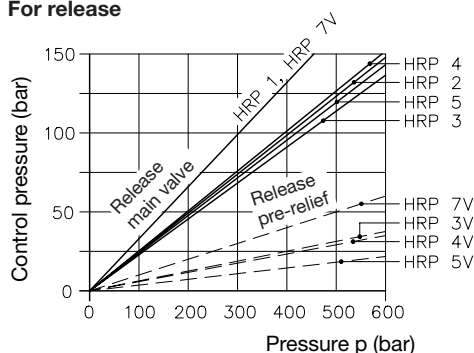

3.1 General and hydraulic

Design Spring loaded ball seated valve, zero leakage
 Pipe connection Via customer furnished manifold
 Ports A, B = Consumer (main passage)
 Z = Control port
 L = Leakage port (piston cavity relief)
 Hydraulic fluid Hydraulic oil acc. to DIN 51524 table 1 to 3; ISO VG 10 to 68 acc. to DIN 51519
 Viscosity range: min. approx. 4; max. approx. 1500 mm²/sec
 Optimal operation range: approx. 10 ... 500 mm²/sec
 Also suitable are biologically degradable pressure fluids type HEPG (Polyalkylenglykol) and HEES (synth. ester) at operation temperatures up to approx. +70°C.
 Temperature Ambient: approx. -40 ... +80°C
 Fluid: -25 ... +80°C, pay attention to the viscosity range!
 Start temperature down to -40°C are allowable (Pay attention to the viscosity range during start!), as long as the operation temperature during subsequent running is at least 20K higher. Biological degradable pressure fluids: Pay attention to manufacturer's information. With regard to the compatibility with sealing materials do not exceed +70°C.
Attention: Observe the corresponding notes in pamphlets D 7300 or D 7470 A/1, when a directional seated valve is mounted and the operating temperature exceeds 35°C!

Δp-Q-curves

Control pressure
 p_{contr} (bar) at port Z
 and $p_B = 0$ bar
 (pressure at port B)

For release

For maintaining the valve open

$$p_{contr} = a \Delta p + b p_B + c$$

standing for
 Δp = Back pressure (bar)
 A → B acc. to the
 Δp -Q-curve (below)
 p_B = Pressure (bar) at port B

	HRP 1	HRP 2	HRP 3(V)	HRP 4(V)	HRP 5(V)	HRP 7V

3.2 Orifice inserts at control port Z

Orifice inserts are used to prevent decompression surges (see also sect. 1). It should be kept in mind that a too pronounced damping might cause a prolonged closing time. The optimum orifice diameter can be only found by tests.

Order example: HRP 2 - B 0,4

Orifice insert
 The manifold is not available at HAWE!

HRP 1 ... 5

Order No. of orifice insert	∅ (mm)	Coding
B 5585 038/1	0.4	B 0,4
B 5585 037/1	0.6	B 0,6
B 5585 034/1	0.8	B 0,8

HRP 7

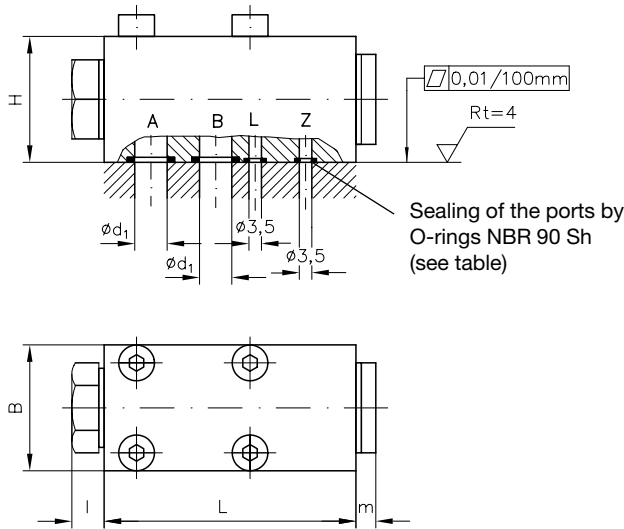

Type of orifice insert	∅ (mm)	Coding
EB 1-0,4	0.4	B 0,4
EB 1-0,6	0.6	B 0,6
EB 1-0,8	0.8	B 0,8

4. Unit dimensions

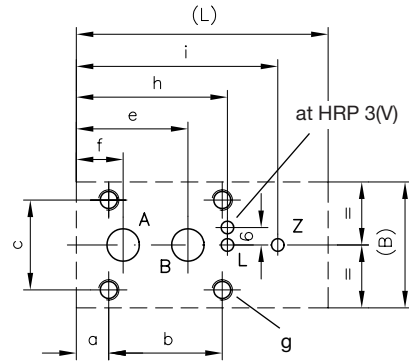

All dimensions in mm, subject to change without notice!
