**Functional principle**

The barcode reader consists of a camera and an integrated light (not IVUPRBI version) able to scan up to 10 different barcodes and to transmit the data via Ethernet IP interface. A selection can be configured for certain barcode types such as DataMatrix (ECC 200) and a number of linear codes such as Code128, Code39, CODABAR, Interleaved 2 of 5, EAN13, EAN8, UPCE, Postnet, IMB and Pharmacode.

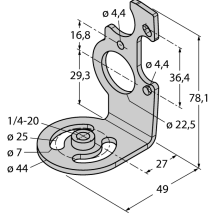

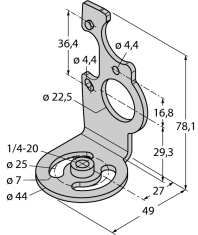

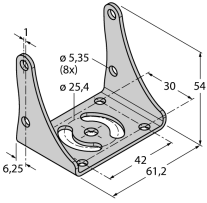

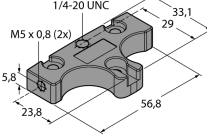

Sensor configuration via PC is not required! Transmission of log files and firmware updates via USB interface.

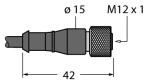

#### Selecting the focal length

With known object size or scan field the matching vision sensor is found simply by determining the ratio between the sensing range and the focal length. Use the graphics for selection. Here, the sensing ranges are put in relation to the field view and the lens focal length.
