# TECHNICAL GUIDE

## THE TEMPERATURE OF PANELS

The power dissipated by electronic devices produces heat that builds up inside cabinets and switchboards. Add the presence of humidity and it's even easier to understand the importance of adopting an internal temperature control system.

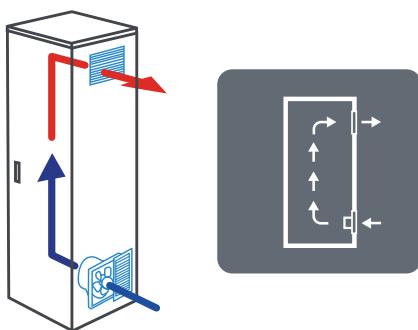

Operating temperatures and humidity are the two greatest responsibilities of the process variables altering the internal components wear performance (with locks and costly inefficiencies) therefore decreasing durability and reliability.

Environment, type and apparatus numbers are the basic factors used in deciding the appropriate thermal control apparatus.

O. Erre has always been attentive to business issues in the field of aero-thermal parts and has further expanded its line by creating T° Control: a product line dedicated solely to thermal control switchboards.

## T° VENTILATION

### COOLING FORCED AIR VENTILATION

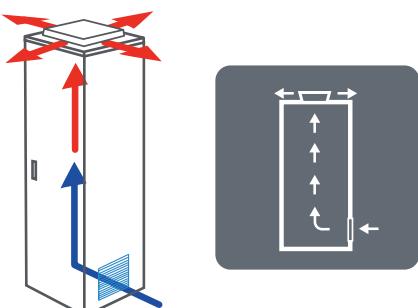

Forced ventilation allows for a quick and efficient disposal of waste heat from the components by changing the air inside the cabinet. The fan groups are composed of a ventilator, equipped with a filter and entry grid, combined with an output air grid which provides the most simple, straightforward and economic way to reduce the temperature inside the electrical cabinet.

The fan is installed at the bottom of the cabinet, filtering and emitting air, while through the top of the grille, hot air is expelled, creating a through exchange of air, obtaining efficient heat dissipation.

In addition, pressure generated by the ventilation prevents the entrance of non-filtered air from holes or cracks.

## T° AIRING

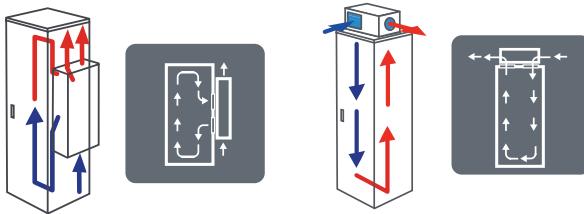

When an electrical panel has to extract a significant amount of heat and / or on its side walls, fans can not be installed, so forced ventilation can be achieved through the roof extractors (towers) and one or more grid filter with air inlets positioned at the bottom. The main feature of the ventilation towers is its high airflow.

The vacuum generated by the tower installed on top of the cabinet, draws outside air installed at the bottom of the grid thus realizing the exchange of the air volume inside and consequent heat dissipation.

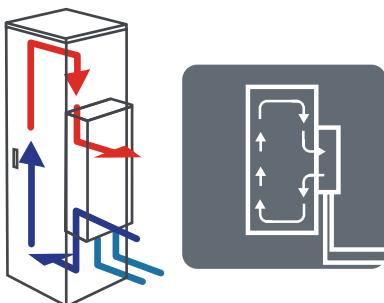

## T° AIR CONDITIONING

### AIR CONDITIONERS

The cooling devices permit air to obtain an internal temperature inside the cabinet bottom inferior to external temperatures and at the same time maintaining the separation of the conditions inside the framework from the external conditions. This is their main use. So, when the outside air temperature is elevated (and therefore not suitable to dissipate heat by ventilation) and there is also the need to maintain a separate environment inside the framework from the outside, the air conditioning system shows its reason to exist.

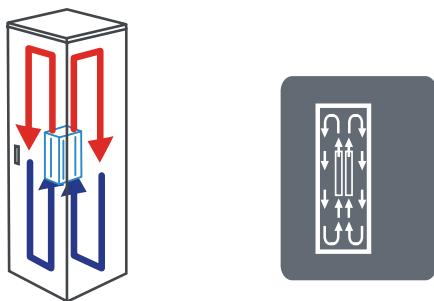

### AIR/WATER EXCHANGERS

The air-water heat exchangers control cabinet meet the requirements to steadily maintain the temperature inside by exploiting cool water from the water circuits. They are suitable for use in environments where the frameworks electricity requires a high degree of protection (Presence of water jets, conductive dust, etc.).

## T° ANTI-CONDENSATION

### SOMETIMES IS BETTER TO WARM UP...

The use of a heater prevents condensation inside electrical panels; ensuring minimum temperature. Their use is to support the proper functioning of the other components present in the control cabinet.

## DRILLING SCHEME FOR FAN ASSEMBLY AND GRILLE

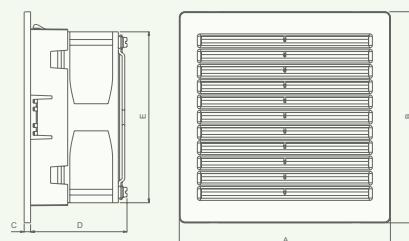

Model      A      B      øC  
**RCQ 50.11** | 92x92 | 95x95 | 2,6

## RCQ 50.11

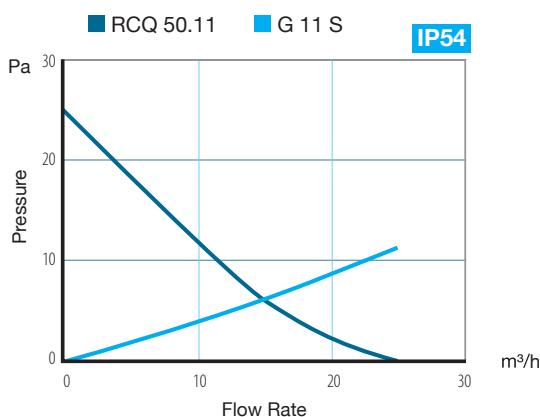

- Axial fans supplied with grille and filter;
- Low external profile;
- IP54 protection degree (IP44 on request);
- Maximum operating temperature: +70°C;
- Quick and functional assembly of the fan on the electrical cabinet through elastic click hooks and gasket pre-installed on the product;
- Possible installation with screws (not provided);
- Body made of ABS self-extinguishing material grey RAL 7035;
- Ball bearing motor;
- Grille in grey RAL 7035 (RAL 7032, black RAL 9005 available on request);
- Easily removable grille to allow quick replacement of the filter;
- Slotted external grilles to allow drainage of condensation;
- In accordance with European Standard EN 60529, EN 60335-2-80;
- Available UL version.

## RC 14.25

250X250 - 250 m<sup>3</sup>/h

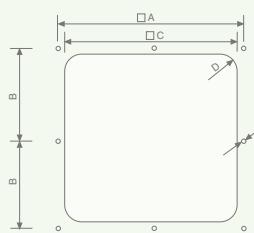

### RC 14.25

- Axial fans supplied with grille and filter;
- Medium external profile;
- IP44 or IP54 protection degree;
- Quick and functional assembly of the fan on the electrical cabinet through elastic click hooks and gasket pre-installed on the product;
- Maximum operating temperature: +50°C;
- Possible installation with screws (provided);
- Electrical connection through terminal block;
- Ball bearing motor;
- Body made of ABS self-extinguishing material grey RAL 7035;
- Grilles in grey RAL 7032 and 7035, black RAL 9005;
- Easily removable grille to allow quick replacement of the filter;
- In accordance with European Standard EN 60529, EN 60335-2-80.

## RC 14.32

- Axial fans supplied with grille and filter;
- Medium external profile;
- IP44 or IP54 protection degree;
- Quick and functional assembly of the fan on the electrical cabinet through elastic click hooks and gasket pre-installed on the product;
- Maximum operating temperature: +50°C;
- Possible installation with screws (provided);
- Electrical connection through terminal block;
- Ball bearing motor;
- Body made of ABS self-extinguishing material grey RAL 7035;
- Grilles in grey RAL 7032 and 7035, black RAL 9005;
- Easily removable grille to allow quick replacement of the filter;
- In accordance with European Standard EN 60529, EN 60335-2-80.

## SYSTEMA

### SYSTEMA

- Complete ventilation system;
- Kit composed of: complete fan with grille and filter grille for air exhaust filter for air exhaust grille;
- IP43, IP44, IP54 or IP55 protection degrees;
- Body and grille made of ABS self-extinguishing material grey RAL 7035;
- In accordance with European Standard EN 60529, EN 60335-2-80.

## OPERATION

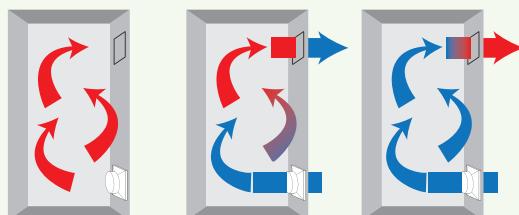

The outside air is filtered and drawn into the lower section of the control cabinet.

After cooling the warm air is drawn out through a grille which is situated at the top of the control cabinet.

This process generates considerable advantages in terms of life and quality of the functioning of the fans. The internal over-pressure prevents the possible entry of dust into the control cabinets ensuring better performance of the electrical and electronic equipment fitted inside.

Maintain as much distance as possible between the fan and the grille.

A regular maintenance of the filters is recommended to ensure better and lasting operation of the fans.

## EXTRA SLIM AXIAL FANS

## RQ 50 - RQ 60 - RQ 160 - RQ 370

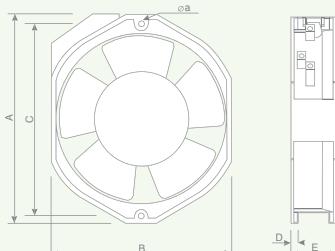

- DC and AC axial fans;
- Ball bearing motor;
- Specifically designed for fitting in electrical and electronic equipment cabinets;
- Body made of nylon for DC Models, die-cast aluminium for AC Models;
- Impeller made of nylon reinforced with fiberglass except RQ 850 model;
- Maximum operating temperature: +70°C (except RQ 850 model +60°C)

### DIMENSIONS

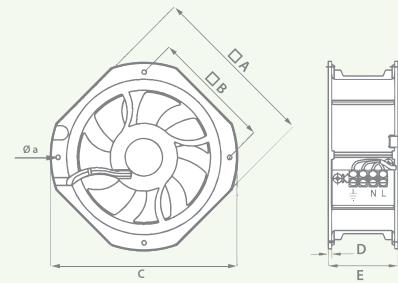

| Model            | Ø Hole | A   | B    | C  | D   | Ø a | Kg   |

## T° AIRING

COOLING FORCED  
AIR EXTRACTION

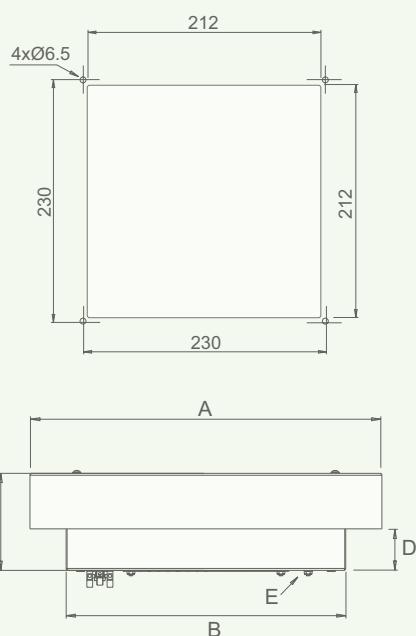

## TXQ 550

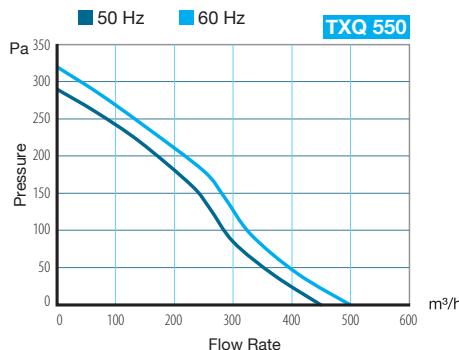

### TXQ 550

- Roof exhaust fan to extract air directly outside;
- Ball bearing motor;
- IP24 protection degree;
- IP44 side cabinet protection degree;
- Maximum air temperature 60°C;
- Quick and functional installation inside the cabinet; Supply cable (0,75 mt) included;
- Energy saving and noiseless;
- Painted steel body complete with plastic cover, Grey colour RAL 7035;
- Safety protection grille;
- Ball bearing motor impeller self-cleaning backward curved blades;
- Adjustable speed through industrial controllers RGM2 or RGE (optional);
- Necessary to provide for installation an air intake grille in the lower part of the control cabinet;
- In accordance with Standard EN 60335-2-80.

### DIMENSIONS

Model TXQ 550 | A 308x308 | B 270x270 | C 135 | D 50 | E 4-M6 | Kg 3,5

EXCHANGERS

# AC EM AIR CONDITIONING

## WALL MOUNT AIR CONDITIONERS

- External, wall mount air conditioners;
- Thermal management independent from the external temperature;
- Meet the requirement to keep separate the environment inside control cabinet from the external environment;
- Hermetic type compressor, copper pipes/aluminium fins exchangers;
- R134a refrigerant charge;
- Easy maintenance;
- IP54 side cabinet protection degree;
- Internal and external fans with ball bearing motor;
- Painted steel cabinet grey RAL 7035;
- Easy installation;
- Suitable when a lower temperature inside cabinet and higher IP protection degree (IP54) is required;
- Standard digital electronic thermostat;
- provided with sealing gasket, eyebolts for lifting, flexible pipe for condensation waste;
- Ambient temperature: 0 ÷ 55°C;
- Cabinet temperature: 20 ÷ 50°C.

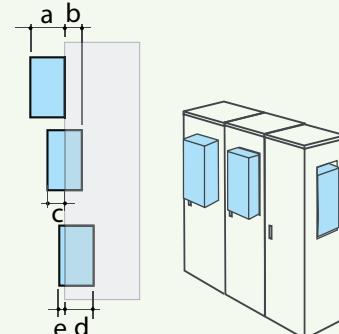

## INSTALLATIONS

- External: completely outside
- Partially recessed: mounting through dedicated adapter
- Recessed: mounting through dedicated adapter

## AC RM AIR CONDITIONING

### ROOF MOUNT AIR CONDITIONERS

- External, roof mount air conditioners;
- Thermal management independent from the external temperature;
- Meet the requirement to keep separate the environment inside control cabinet from the external environment;
- Hermetic type compressor, copper pipes/aluminium fins exchangers;
- R134a refrigerant charge;
- Easy maintenance;
- IP54 side cabinet protection degree;
- Internal and external fans with ball bearing motor;
- Painted steel cabinet grey RAL 7035;
- Easy installation;
- Suitable when a lower temperature inside cabinet and higher IP protection degree (IP54) is required;
- Standard digital electronic thermostat, provided with sealing gasket, eyebolts for lifting, flexible pipe for condensation waste;
- Ambient temperature: 0 ÷ 55°C
- Cabinet temperature: 20 ÷ 50°C

# HEX WA EXCHANGERS

## WATER/AIR HEAT EXCHANGERS

- External, wall mount water to air heat exchangers;
- Suitable to maintain an internal cabinet constant temperature, taking advantage of the cold water availability;
- Maintenance free;
- IP65 side cabinet protection degree gasket properly installed;
- Internal fans with ball bearing motor;
- Painted steel cabinet grey RAL 7035
- Easy installation;
- Suitable for specific applications in difficult environments both for temperature and pollution;
- Suitable when a higher IP protection degree inside cabinet is required (water jets, conductive dusts);
- Cooling water connection 3/8 inches;
- Ambient temperature: 1 ÷ 70°C;
- Cabinet temperature: 1 ÷ 55°C.

# T° ANTI-CONDENSATION

TO PREVENT CONDENSATION  
INSIDE THE ELECTRICAL CABINET

HE HEV

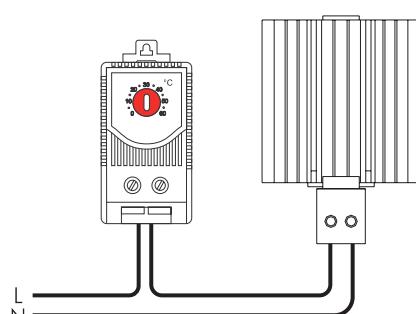

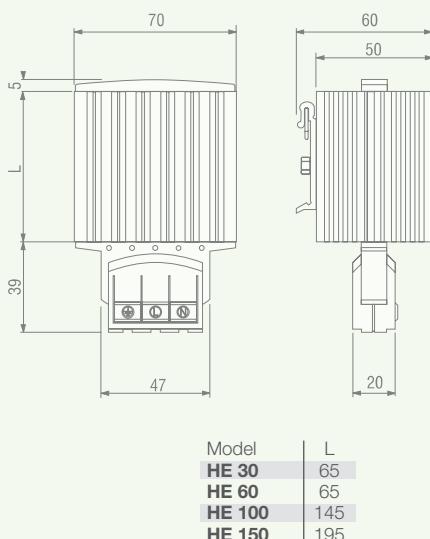

# HE

## HE Anti-condensation heaters

- Heaters designed to prevent condensation and to ensure a minimum operating temperature in the control cabinets;
- They are a valid support for the correct functioning of the other electric components in the control cabinet;
- Made of extruded aluminium anodised with a PTC resistor inside;
- Energy saving;
- Cage clamp connectors for quick and easy wiring: with stranded wire 0,5 -1,5 mm<sup>2</sup>; with rigid wire 0,5 - 2,5 mm<sup>2</sup>;
- Clip for 35 mm DIN rail;
- Storage temperature range: -40 ÷ 80°C;
- Operating temperature range: -40 ÷ 70°C;
- Vertical mounting position (with bottom connection terminals).

## HEV

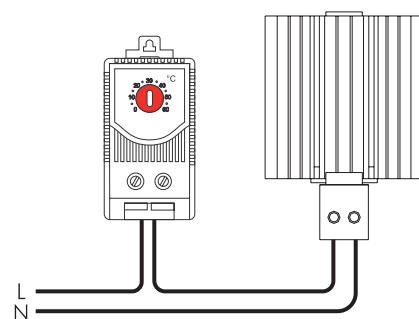

### HEV Anti-condensation ventilated heaters

- Heaters designed to prevent condensation and to ensure a minimum operating temperature in the control cabinets;
- They are a valid support for the correct functioning of the other electric components in the control cabinet;
- The integrated axial fan provides forced air circulation;
- Made of extruded aluminium anodised with a PTC resistor inside;
- Internal connection terminal 2,5 mm<sup>2</sup>
- Clip for 35mm DIN rail;
- Storage temperature range: -40 ÷ 80°C
- Operating temperature range: -40 ÷ 70°C;
- Vertical mounting position (with bottom connection terminals).

## TMS THERMOSTATS

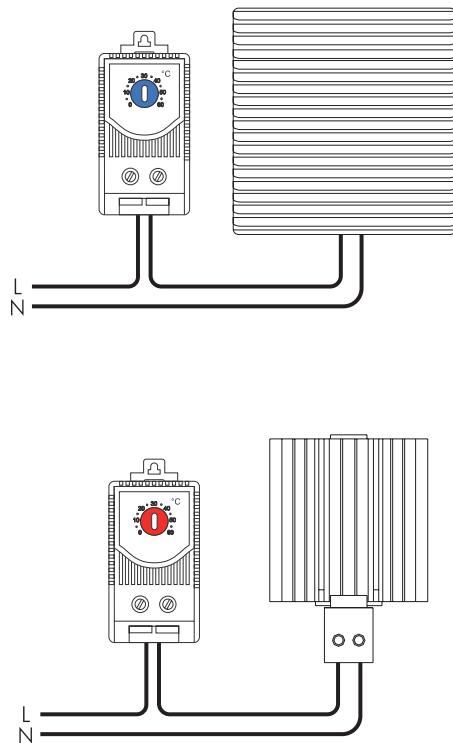

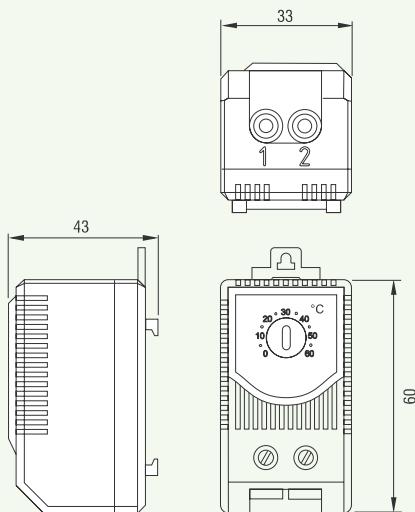

### TMS NC - TMS NO

- Thermostats used to control temperature inside the control cabinets;
- Suitable for controlling filter fans and heaters;
- Small size;
- Bi-metallic sensor element;
- Clip for 35mm DIN rail;
- Endurance > 100.000 cycles;
- Variable fitting position;
- Storage temperature range: -45 ÷ 80° C;
- 2 poles terminal, rigid wire 2,5 mm<sup>2</sup>, stranded wire 1,5 mm<sup>2</sup>;
- TMS NO (blue regulation knob) normally open contact, for switching filter fans when the temperature limit has been exceeded;
- TMS NC (red regulation knob) normally closed contact for switching heaters when the detected temperature is lower than the preset one.

## TMS DUAL THERMOSTAT

### TMS D

- TMS D dual thermostat, for controlling separately on/off switch of filter fans and heaters;
- Normally open contact, for switching filter fans when the temperature limit has been exceeded;
- Normally closed contact for switching heaters when the temperature limit goes down the preset one;
- Small size;
- Bi-metallic sensor element;
- Clip for 35mm DIN rail;
- Endurance > 100.000 cycles;
- Variable fitting position;
- Storage temperature range: -45 ÷ 80° C;
- 4 poles terminal, rigid wire 2,5 mm<sup>2</sup>, stranded wire 1,5 mm<sup>2</sup>.

## HYM

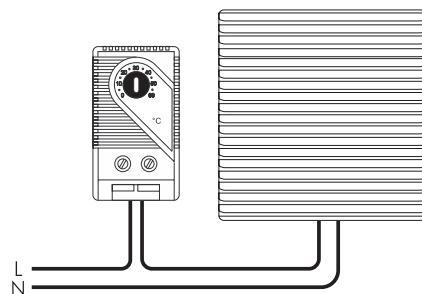

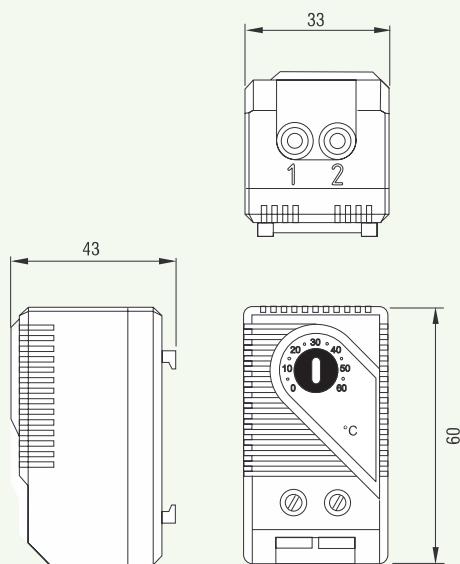

### HYM Mechanical Hygostat

- Hygostat for regulating humidity inside the control cabinets;
- Suitable for controlling filter fans, heaters when a preset humidity level is exceeded;
- Small size;
- Clip for 35mm DIN rail;
- Endurance > 100.000 cycles;
- Variable fitting position;
- Storage temperature range: -20 ÷ 80°C;
- 3 poles terminal, rigid wire 2,5 mm<sup>2</sup>, stranded wire 1,5 mm<sup>2</sup>.

### DIMENSIONS

### TECHNICAL DATA

## PW

### TECHNICAL DATA

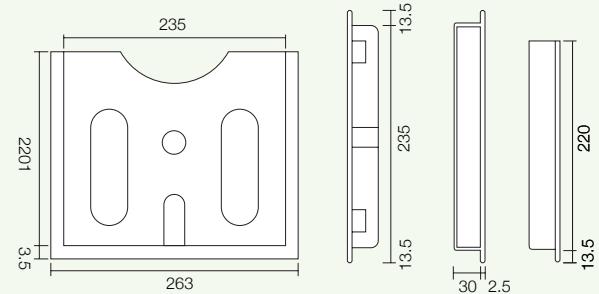

Model  
**PW**

Code  
0097050

### PW Pocket Wallet

Pocket wallet made of plastic material, A4 format. Specially designed to contain wiring diagrams of the control cabinet. Supplied with double-sided adhesive pre-mounted. Holes for fixing with screws (not provided).

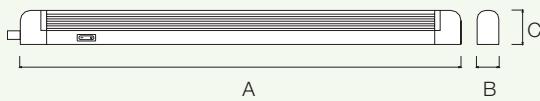

### DIMENSIONS

## FCL

### DIMENSIONS

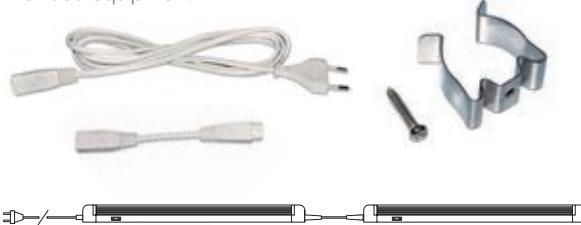

| Model         | A   | B  | C  |
|---------------|-----|----|----|
| <b>FLC 6</b>  | 280 | 22 | 42 |
| <b>FLC 8</b>  | 350 | 22 | 42 |
| <b>FLC 13</b> | 570 | 22 | 42 |
| <b>FLC 21</b> | 915 | 22 | 42 |

### FCL Fluorescent lamps

- Fluorescent compact lamps for lighting of control cabinets;
- Casing lamp made of thermoplastic and diffuser in transparent striped polymethacrylate;
- ON/OFF switch;
- Equipped with fluorescent lamps type T5;
- IP20 protection degree;
- Operating temperature range: +5 ÷ 45°C
- Fixing with click hooks with screws (provided);
- Possibility to connect multiple lamps through the connection cable provided (0,15 mt);
- Power cable 1,70 mt;
- Energy saving.

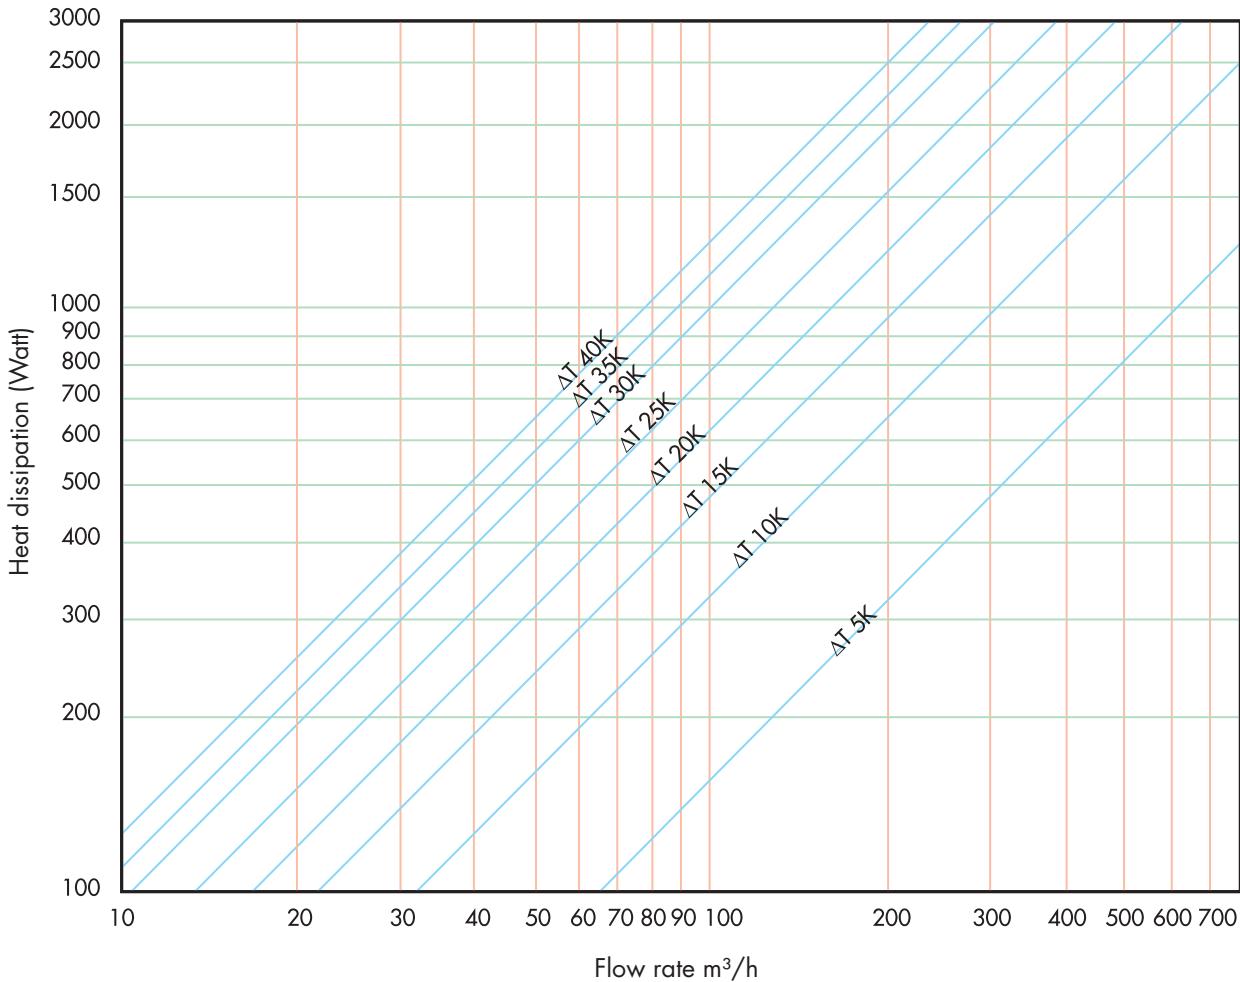

Provided equipment

# SELECTION CHART FOR FILTER FANS INSTALLATION

The correct air capacity for appropriate selection of the fan assembly can be determined by consulting the above diagram.

- First determine the following:
  - The thermal power dissipated by the electronic equipments.
  - The maximum temperature allowed inside the control cabinet.
  - The maximum ambient temperature foreseen outside the control cabinet.
- Calculate the  $\Delta T$  as the differences between the two temperatures.
- The point at which the horizontal frame line (green) of the dissipated thermal power bisects the diagonal line (blue) of the temperature difference ( $\Delta T$ ) will show the vertical line (red) indicating the air capacity required for the necessary dissipation in  $m^3/h$ .
- Choose the correct fan on the performance table.

Natural heat loss through the cabinet wall should be taken into account.

In order to compensate the reduction of flow rate caused by dirty filters, an increase of 20% to the obtained value is advisable.

 All products included in this catalogue meet the essential requirements of EU directives.
