

JUMO diraTRON 104/108/116/132

Compact controller

Brief description

The controller series comprises five freely configurable, universally usable compact controllers in various DIN formats to control temperature, pressure, and other process variables.

The devices are characterized by a simple, clearly structured operation supported with texts. Process values and parameters are represented by two 18-segment LCD displays. The types 702112, 702113 and 702114 are additionally equipped with a pixel matrix LCD display for displaying text. In addition, all devices have individual display elements for the switch positions of the outputs as well as for manual mode, ramp function, and timer. The devices are operated using a membrane keyboard with four buttons and can be used under harsh environmental influences thanks to the high IP65 protection type.

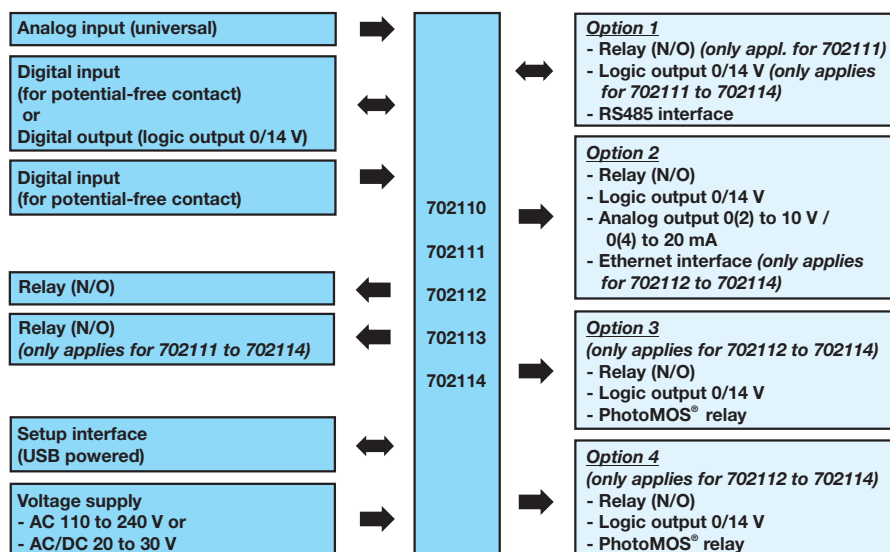

Depending on the hardware design, the devices can be used as two-state controllers, three-state controllers, three-step controllers, or continuous controllers. The basic type includes autotuning, a ramp function, a program controller, manual mode, limit value monitoring functions, digital control signals, extensive timer functions, and a service counter. A math and logic function is also available as an option. Furthermore, the user has the option to create his/her own application using structured text (ST code).

The devices can be conveniently configured using a PC with the help of the setup program (incl. program editor and ST editor). No separate voltage supply is required when configuring via the USB interface (USB-powered).

diraTRON 104 / type 702114

Block diagram

Special features

- Fixed-setpoint controller or program controller
- 2 parameter blocks
- Autotuning
- Setpoint changeover (4 setpoint values)
- Ramp function
- Timer function
- 4 limit value monitoring functions
- Service counter
- Individual user level
- Own application using structured text (ST code; option)
- Math and logic function (option)
- Fast wiring through Push-In technology
- RS485 or Ethernet interface (option)
- Additional analog and digital inputs via interface

Approvals and approval marks (see "Technical data")

Device types

diraTRON 132 / type 702110

diraTRON 116 / type 702111

diraTRON 108 (H) / type 702112

diraTRON 108 (Q) / type 702113

diraTRON 104 / type 702114

Description

Inputs and outputs

Each device type has a universal analog input (for RTD temperature probe, thermocouple, current, voltage, resistance transmitter, resistance/potentiometer), a digital input and a switchable digital input/output. With the exception of type 702110, where the basic type has one relay output (N/O contact), all remaining types are equipped with two relay outputs (N/O contacts). The digital inputs are provided to connect a potential-free contact. The digital output provides a logic signal 0/14 V.

Additional relay outputs (N/O contacts), the logic outputs (0/14 V), PhotoMOS[®] relay outputs¹ and an analog output (0(2) to 10 V / 0(4) to 20 mA) are available as options.

Signal allocation via selectors

The input signals of the analog input and the digital inputs are available for further use in the device in so-called selectors (analog selector, digital selector). The trigger signals for the analog output and the digital outputs are also assigned via selectors, which allows for flexible signal/function assignment.

Interfaces

The device is equipped with a USB device interface (micro-B socket on the rear of the device) that is provided for the connection to a PC and is only used for the setup program. Thereby the device is powered via the USB interface. As a result, no mains supply is required during the configuration.

A RS485 interface is also available as an option which is provided for communication with a Modbus master (Modbus-RTU operating mode). The master can transmit up to two analog values and two binary values to the device that are used there as external input signals. Two analog flags and two digital flags (binary) are also available.

An Ethernet interface is also available as an option, which supports the Modbus-TCP and Modbus-RTU/ASCII via TCP operating modes. This allows the same parameters and process values to be transferred as via the RS485 interface.

Voltage supply

The device is available in two voltage supply variants: AC 110 to 240 V or AC/DC 20 to 30 V, each 48 to 63 Hz.

Electrical connection

The electrical connection saves time by using practical spring-cage terminals (Push-In technology).

Controller types and structures

The device is a one-channel controller that can be configured as a two-state controller, three-state controller, three-step controller, and continuous controller. Depending on the controller type, different controller structures can be prescribed (P, I, PD, PI, PID) using adjustable controller parameters. The controller supports two switchable parameter blocks.

The controller setpoint can also be switched. Up to four setpoint values can be entered. The selection of the active setpoint value is controlled by two binary signals.

Autotuning

Autotuning (oscillation method or step response method) also makes it possible for the controller to be matched to the control process by a user who is not a control technology expert. The way the control process reacts to changes in the actuating variable is evaluated in the process and certain controller parameters are calculated.

Ramp function

The ramp function is used for a constant change of setpoint value up to the ramp limit value (entered setpoint value). A rising or a falling edge arises depending on the actual value at the time of the ramp start. The slope is defined via two adjustable gradients (upward, downward). The ramp function is controlled via binary signals (start, brake, stop).

Program controller

The controller can also be operated as a program controller. Using a program editor, the user can create a program for a setpoint value and four operating contacts with up to 24 program sections. This program is processed by the program generator. Details such as program start, program repeat and the type of setpoint value change (jump or ramp) are specified by the configuration of the program generator.

Limit value monitoring

The device is equipped with four limit value monitoring functions, each with eight configurable alarm functions. Any analog signal from a selector is selected as the value to be monitored. An absolute value or a value that depends on an additional analog signal serves as the limit value. Special functions such as switch-on/switch-off delay, pulse function, alarm suppression in the switch-on phase or in

¹ PhotoMOS is a registered trademark of Panasonic Corporation.

case of a parameter change, alarm latch and lock with acknowledgment are available. With the limit value monitoring function, extensive alarm and limit value functions can be implemented.

Digital controller signals

Up to four digital control signals can be configured using this function. In this process, the control signal is formed either by an AND/OR/XOR link of up to three selectable binary signals.

Or a single binary signal serves as an input signal and is output as a pulse-shaped signal, as a delayed signal, as a so-called wiper signal, or as an edge-triggered signal. In the latter case the rising or falling edge of the binary signal is detected, and the output signal is activated for the duration of the sampling interval.

The output signal can be inverted in all specified cases.

Timer

After the timer is started, a signal is output for the duration of the timer running time; this signal is invertible. It is also possible to start the timer after the lead time has elapsed or after reaching a tolerance limit. A timer end signal can be output after the timer has elapsed (limit by time or acknowledgement).

The timer can be used to implement various, time-dependent functions like time-limited control or setpoint changeover or a time-delayed control.

Service counter

The device is equipped with a counter function that can be used as a service counter. To this end, either the switching frequency of a binary signal is counted or its duty cycle is determined. When the set limit value is reached, a binary signal is activated that needs to be acknowledged.

In addition, an operating hours counter is available that determines the device's operation time.

Math and logic function

The optional math and logic function (extra code) can be used to link analog or binary values. Up to four freely configurable maths or logic formulae can be created using the setup program. The results are available in the analog or digital selector for further use.

Individual user level

The individually configurable user level contains up to 16 editable configuration parameters. The parameters are selected in the setup program.

Setup program

The setup program provides the user with an easy and comfortable way to configure the device using a PC. You can use it to create and edit data records, transfer them to the device, and extract them from it. The data can be stored and printed. In addition, the user can easily create and print out a connection diagram that shows the current terminal assignment of the device.

Startup: the startup function is for recording process variables during startup (max. 24 hours). The recorded diagrams are available on the PC and can, for example, be used for system documentation.

Online data: The device's current process variables are shown in a separate window.

Program editor: In addition to the program editor inside the device, the setup program also provides the option to create a setpoint value program.

Customer-specific linearization

Sensor signals with special characteristic line characteristics can also be used through customer-specific linearization. Programming is carried out in the setup program on the basis of a value table with up to 40 value pairs or through a formula (4th order polynomial).

Structured text

The user has the option to create his/her own application using the "Structured text" option (extra code).

The application with the ST editor, which is part of the setup program, is created in the PLC programming language "Structured text". The finished application is transmitted to the device and continuously processed there. There are online-debugger functions available in the ST editor for testing and troubleshooting.

Up to 10 stored text messages can be displayed via the ST code depending on the application.

Controller parameters

The following table shows the parameters in a parameter block. Depending on the controller type configured, certain parameters may be omitted or ineffective. The transmission behavior is specified by the selection of the controller structure and determined by the configuration of the parameters for the proportional band (P component), derivative time (D component), and reset time (I component). Parameters that appear in pairs such as Proportional band Xp1 and Xp2 refer to the first and second controller outputs.

The same parameters are also available for the second parameter block.

Parameter	Value range	Factory setting	Unit	Meaning
Controller structure 1	P, I, PD, PI, PID	PID		Transmission behavior of the first controller output
Controller structure 2	P, I, PD, PI, PID	PID		Transmission behavior of the second controller output with a three-state controller
Proportional band Xp1	0 to 9999	0	Physical unit of the controller size	Size of the proportional band The controller structure is not effective with 0 (behavior identical to limit value monitoring)! Xp1/2 > 0 must be for a continuous controller.
Proportional band Xp2	0 to 9999	0	Physical unit of the controller size	
Derivative time Tv1	0 to 9999	80	s	Influences the differential component of the controller output signal.
Derivative time Tv2	0 to 9999	80	s	
Reset time Tn1	0 to 9999	350	s	Influences the integral component of the controller output signal.
Reset time Tn2	0 to 9999	350	s	
Cycle time Cy1	0 to 9999	20	s	When using a switched output, the cycle time should be chosen so that the energy supply to the process is as continuous as possible without overloading the switching elements.
Cycle time Cy2	0 to 9999	20	s	
Contact spacing Xsh	0 to 999	0	Physical unit of the controller size	Spacing between the two control contacts of a three-state controller and three-step controller
Switching differential Xd1	0 to 999	1	Physical unit of the controller size	Hysteresis for a switching controller with proportional band Xp = 0
Switching differential Xd2	0 to 999	1	Physical unit of the controller size	
Actuator time TT	5 to 3000	60	s	Control valve running time range used for a three-step controller
Working point Y0	-100 to +100	0	s	The output level for P and PD controllers (if x = w then y = Y0)
Output value limit Y1	0 to 100	100	%	Maximum output value limit (only effective if Xp > 0)
Output value limit Y2	-100 to +100	-100	%	Minimum output value limit (only effective if Xp > 0)
Minimum relay ON time Tk1	0 to 9999	0	s	Limits the switching frequencies for switched outputs (digital outputs) Recommended setting when using a relay as controller output: ≥ 0.15 s
Minimum relay ON time Tk2	0 to 9999	0	s

Digital inputs

Input for potential-free contact	
Function	Contact closed: input is active ($R_{ON} < 1 \text{ k}\Omega$) Contact open: input is inactive ($R_{OFF} > 50 \text{ k}\Omega$)
Sampling rate	150 ms

Analog output

Voltage	
Output signal	DC 0(2) to 10 V
Load resistance	$> 500 \Omega$
Current	
Output signal	DC 0(4) to 20 mA
Load resistance	$< 450 \Omega$
Accuracy	$\leq 0.5 \%$
Ambient temperature influence	$\leq 150 \text{ ppm/K}$

Digital outputs

Relay (N/O contact)	
Switching capacity	Max. 3 A at AC 230 V or DC 30 V, resistive load
Contact life	150,000 operations at rated load 350,000 operations at 1 A
Relay (N/O contact) with longer contact life	
Switching capacity	Max. 3 A at AC 230 V, resistive load
Contact life	300,000 operations at rated load 1,500,000 operations at 1 A
Logic output	
Output signal	DC 0/14 V $\pm 15 \%$
Current	Max. 20 mA per output (at nominal voltage 14 V)
Switching time when used as a controller output	Min. 10 ms
PhotoMOS [®] relay ^a	
Switching capacity	Max. 200 mA at AC 30 V or DC 45 V; not short-circuit proof

^a PhotoMOS is a registered trademark of Panasonic Corporation.

Interfaces

USB device	
Connector type	Micro-B (socket)
Standard	Low-Speed, Full-Speed
Max. cable length	5 m
RS485	
Baud rate	9600, 19200, 38400, 115200
Data format	8/1n, 8/1e, 8/1o, 8/2n
Protocol	Modbus-RTU as slave
Ethernet	
Connector type	RJ45 (socket)
Transfer rate	10 Mbit/s, 100 Mbit/s
Protocol	TCP/IP, DHCP; Modbus-TCP, Modbus-RTU/ASCII via TCP, as slave

Display

18-segment LCD displays		
Digit height	Upper display:	Lower display:
Type 702110 (format 132)	7.2 mm	3.8 mm
Type 702111 (format 116)	12.3 mm	5.9 mm
Type 702112 (format 108H)	11.5 mm	8.5 mm
Type 702113 (format 108Q)	16.5 mm	9 mm
Type 702114 (format 104)	24.8 mm	12 mm
Color	Upper display: white; lower display: green	
Places, including decimal places	Upper display: 4; lower display: 4 (5 for type 702110, 8 for type 702111)	
Decimal places	0, 1, 2, 3 or automatic (configurable)	
Pixel matrix LCD display (only for types 702112, 702113, and 702114)		
Pixel fields		
Type 702112 (format 108H)	2 rows each with 9 pixel fields	
Type 702113 (format 108Q)	2 rows each with 8 pixel fields	
Type 702114 (format 104)	2 rows each with 11 pixel fields	
Number of pixels per field	8 x 5	
Color	White	

Electrical data

Voltage supply	AC 110 to 240 V +10/-15 %, 48 to 63 Hz AC/DC 20 to 30V, 48 to 63Hz	
Electrical safety	According to EN 61010, part 1; overvoltage category II to 300 V mains voltage, pollution degree 2	
Protection rating	I with internal isolation from SELV	
Power consumption	For AC 110 to 240 V:	For AC/DC 20 to 30 V:
Type 702110 (format 132)	Max. 3.5 W	Max. 3.0 W
Type 702111 (format 116)	Max. 4.1 W	Max. 3.7 W
Types 702112, 702113 (formats 108H, 108Q)	Max. 5.8 W	Max. 5.7 W
Type 702114 (format 104)	Max. 6.6 W	Max. 6.7 W
Electrical connection	On the back via spring-cage terminals (Push-In technology)	
Conductor cross section		
Wire or stranded wire (without ferrule)	Min. 0.2 mm ² , max. 1.5 mm ²	
Stranded wire with ferrule	Without plastic collar: min. 0.2 mm ² , max. 1.5 mm ² With plastic collar: min. 0.2 mm ² , max. 0.75 mm ²	
Stripping length	8 mm	

Environmental influences

Ambient temperature range	
Storage	-30 to +70 °C
Operation	-10 to +55 °C
Site altitude	Max. 2000 m above sea level
Climatic environmental influences	According to DIN EN 60721-3 with extended temperature range
Resistance to climatic conditions	≤ 90 % rel. humidity without condensation
Storage	According to class 1K2
Operation	According to class 3K3

Mechanical environmental influences	According to DIN EN 60721-3
Storage	According to class 1M2
Transport	According to class 2M2
Operation	According to class 3M3
Electromagnetic compatibility (EMC)	According to DIN EN 61326-1
Interference emission	Class A – only for industrial use –
Interference immunity	Industrial requirements

Case

Case type	Plastic housing for panel mounting according to DIN IEC 61554 (indoor use)
Case front	Made of plastic with membrane keyboard
Panel thickness	1 to 10 mm
Case fastening	In panel using the supplied mounting frame or both mounting elements
Operating position	Any ^a
Protection type	According to DIN EN 60529, IP65 on the front, IP20 on the back
Weight	
Type 702110 (format 132)	Max. 85 g
Type 702111 (format 116)	Max. 120 g
Type 702112 (format 108H)	Max. 160 g
Type 702113 (format 108Q)	Max. 160 g
Type 702114 (format 104)	Max. 220 g

^a The maximum admissible ambient temperature only applies for the installation with the display in a vertical position.

Approvals and approval marks

702113 (108Q; 96 mm × 48 mm)	92 ^{+0.8} mm × 45 ^{+0.6} mm	20 mm	30 mm
702114 (104; 96 mm × 96 mm)	92 ^{+0.8} mm × 92 ^{+0.8} mm	20 mm	30 mm

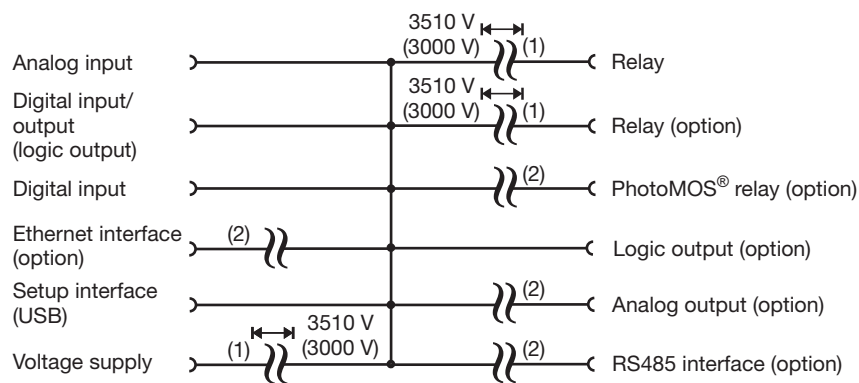

Type 702110 (format 132) mounted on DIN rail (see accessories)

Type 702111 (format 116) mounted on DIN rail (see accessories)

Galvanic isolation

- (1) The voltage specifications correspond to the test voltages (alternating voltage, rms values) according to EN 61010-1:2011-07 for the type test. Type 702110 (format 132): 3000 V instead of 3510 V.
- (2) Functional galvanic isolation for the connection of SELV or PELV circuits.

Display and control elements

- (1) 18-segment LCD display (e.g. actual value), 4-digit, white;
for types 702110 (132) and 702111 (116) also for displaying menu items, parameters and text)
- (2) 18-segment LCD display (e.g. setpoint value), 4-digit (702110 (132): 5-digit, 702111 (116): 8-digit), green;
for types 702110 (132) and 702111 (116) also for displaying menu items, parameters, values and text);
display "OK" when exiting editing mode (with change)
- (3) Activity display for ramp function/program, timer, manual mode
- (4) For types 702112 (108H), 702113 (108Q) and 702114 (104): pixel matrix LCD display for displaying menu items, parameters and values as well as customer-specific text
- (5) Switching of the digital outputs (yellow = active)
- (6) Up (in the menu: increase value, select previous menu item or parameter; in basic status: increase setpoint value)
- (7) Down (in menu: reduce value, select next menu item or parameter; in basic status: reduce setpoint value)
- (8) Back (in menu: back to previous menu level, exit editing mode without change; in basic status: configurable function)
- (9) Menu/OK (call up main menu, switch to submenu/level, switch to editing mode, exit editing mode with change)

Connection elements

Type 702110 (format 132)

Type 702110 (48 mm × 24 mm)

Terminals	Connection	Terminals	Connection	Terminals	Connection
1, 2	Output 1 (relay)	8, 10	Input 2 (for potential-free contact)	L1(L+), N(L-)	Voltage supply
3, 4	(2) = option 2: output 2 (relay, logic or analog output)	9, 10	Input 1 (for potential-free contact) or output 3 (logic output)	Setup (USB)	PC (setup program)
5-8	Analog input	11, 12	(1) = option 1: RS485 interface		

Type 702111 (format 116)

Type 702111 (48 mm × 48 mm)

Terminals	Connection	Terminals	Connection	Terminals	Connection
1, 2	Output 1 (relay)	8, 10	Input 2 (for potential-free contact)	13, 14	(2) = option 2: output 5 (relay, logic or analog output)
3, 4	Output 2 (relay)	9, 10	Input 1 (for potential-free contact) or output 3 (logic output)	L1(L+), N(L-)	Voltage supply
5-8	Analog input	11, 12	(1) = option 1: output 4 (relay, logic output) or RS485 interface	Setup (USB)	PC (setup program)

Types 702112 (format 108H), 702113 (format 108Q), 702114 (format 104)

Type 702113 (96 mm × 48 mm)

Type 702112 (48 mm × 96 mm)

Type 702114 (96 mm × 96 mm)

Terminals	Connection	Terminals	Connection	Terminals	Connection
1, 2	Output 1 (relay)	9, 10	Input 1 (for potential-free contact) or output 3 (logic output)	17, 18	(4) = option 4: output 7 (relay, logic output or PhotoMOS® relay)
3, 4	Output 2 (relay)	11, 12	(1) = option 1: output 4 (logic output) or RS485 interface	L1(L+), N(L-)	Voltage supply
5-8	Analog input	13, 14	(2) = option 2: output 5 (relay, logic or analog output)	Setup (USB)	PC (setup program)
8, 10	Input 2 (for potential-free contact)	15, 16	(3) = option 3: output 6 (relay, logic output or PhotoMOS® relay)		

If the device is equipped with the Ethernet interface (option 2: RJ45 socket), terminals 11 to 14 are not available.

Connection diagram

The connection diagram in the data sheet provides preliminary information about the connection options. For the electrical connection, only use the installation instructions or the operating manual. The knowledge and the correct technical compliance with the safety information and warnings contained in these documents are mandatory for mounting, electrical connection, and startup as well as for safety during operation.

Analog input

The analog input version is identical for all types.

Measuring probe/ standard signal	Symbol and terminal designation	Measuring probe/ standard signal	Symbol and terminal designation
Thermocouple	6 7	Current DC 0(4) ... 20 mA	6 7 I_x
RTD temperature probe two-wire circuit	5 7	Resistance/potentiometer two-wire circuit	5 7
RTD temperature probe three-wire circuit	5 6 7	Resistance/potentiometer three-wire circuit	5 6 7
Voltage DC 0(2) ... 10 V (useable as alternative to digital input 2)	8 7 U_x	Resistance transmitter	5 6 7 A S E

A = Start
E = End
S = Slider

Digital inputs

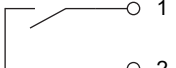

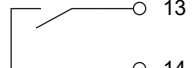

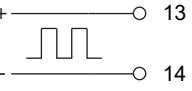

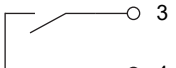

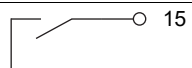

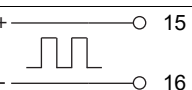

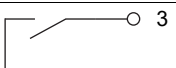

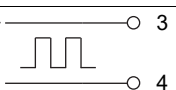

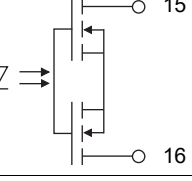

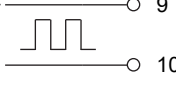

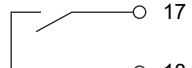

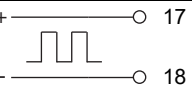

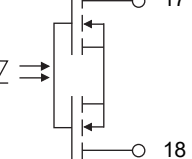

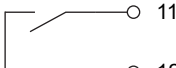

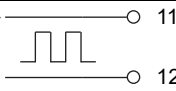

The digital input version is identical for all types.

Input	Version	Symbol and terminal designation	Input	Version	Symbol and terminal designation
1	Digital input for potential-free contact (useable as alternative to digital output 3)	9 10	2	Digital input for potential-free contact (only usable if the analog input is not configured as DC 0(2) ... 10 V)	8 10

Analog output

Version for type 702110 (format 132)		Symbol and terminal designation	Version for types 702111 to 702114		Symbol and terminal designation
Output			Output		
2	Option 2 (alternative to digital output 2): DC 0/2 ... 10 V or DC 0/4 ... 20 mA (configu- rable)	3 4 U_x, I_x	5	Option 2 (alternative to digital output 5): DC 0/2 ... 10 V or DC 0/4 ... 20 mA (configu- rable)	13 14 U_x, I_x

Digital outputs

Output	Version	Symbol and terminal designation	Output	Version	Symbol and terminal designation
1	Relay (N/O contact)		5	Option 2 for types 702111 (116) , 702112 (108H) , 702113 (108Q) and 702114 (104) (alternative to analog output): Relay (N/O contact) or logic output 0/14 V	 
2	Relay (N/O contact), (for type 702110 as option 2, see below)		6	Option 3 for types 702112 (108H) , 702113 (108Q) and 702114 (104) : Relay (N/O contact) or logic output 0/14 V or PhotoMOS [®] relay	 
	Option 2 for type 702110 (132) (alternative to analog output): Relay (N/O contact) or logic output 0/14 V	 			
3	Logic output 0/14 V (usable as alternative to digital input 1)		7	Option 4 for types 702112 (108H) , 702113 (108Q) , and 702114 (104) : Relay (N/O contact; only with longer contact life) or logic output 0/14 V or PhotoMOS [®] relay	  
4	Option 1 for types 702111 (116) , 702112 (108H) , 702113 (108Q) , and 702114 (104) (alternative to RS485 interface): Relay (N/O contact), only for type 702111 (116) or logic output 0/14 V	 			

RS485 interface

Version for type 702110 (format 132)	Symbol and terminal designation	Version for types 702111 to 702114	Symbol and terminal designation
Option 1: RS485 interface	RxD/TxD+ —○ 11 RxD/TxD- —○ 12	Option 1 (alternative to digital output 4): RS485 interface	RxD/TxD+ —○ 11 RxD/TxD- —○ 12

Voltage supply

Version (see nameplate)	Symbol and terminal designation	Version (see nameplate)	Symbol and terminal designation
AC 110 to 240 V	L1 —○ L1/L+ N —○ N/L-	AC/DC 20 to 30 V	L+ —○ L1/L+ L- —○ N/L-

Order details

	(1) Basic type
702110	Type 702110 (format 132: 48 x 24 mm) 1 analog input, 2 digital inputs (digital input 1, alternative to logic output), 1 relay (N/O contact), 1 logic output 0/14 V (alternative to digital input 1) incl. timer, ramp function, and program function
702111	Type 702111 (format 116: 48 x 48 mm) 1 analog input, 2 digital inputs (digital input 1, alternative to logic output), 2 relays (N/O contact), 1 logic output 0/14 V (alternative to digital input 1) incl. timer, ramp function, and program function
702112	Type 702112 (format 108H: 48 x 96 mm) 1 analog input, 2 digital inputs (digital input 1, alternative to logic output), 2 relays (N/O contact), 1 logic output 0/14 V (alternative to digital input 1) incl. timer, ramp function, and program function
702113	Type 702113 (format 108Q: 96 x 48 mm) 1 analog input, 2 digital inputs (digital input 1, alternative to logic output), 2 relays (N/O contact), 1 logic output 0/14 V (alternative to digital input 1) incl. timer, ramp function, and program function
702114	Type 702114 (format 104: 96 x 96 mm) 1 analog input, 2 digital inputs (digital input 1, alternative to logic output), 2 relays (N/O contact), 1 logic output 0/14 V (alternative to digital input 1) incl. timer, ramp function, and program function
	(2) Version
8	Standard with default settings ^a
9	Customer-specific configuration (specifications in plain text)
	(3) Option 1^b
0	Not used
1	1 relay (N/O contact) (only for type 702111)
2	1 logic output 0/14 V (only for types 702111, 702112, 702113, 702114)
4	1 RS485 interface (Modbus-RTU)
	(4) Option 2^b
0	Not used
1	1 relay (N/O contact)
2	1 logic output 0/14 V
3	1 analog output
7	1 Ethernet interface (Modbus-TCP, Modbus-RTU/ASCII via TCP/IP; only for types 702112, 702113, 702114); option 1 does not apply
	(5) Option 3^b (only for types 702112, 702113, 702114)
0	Not used
1	1 relay (N/O contact)
2	1 logic output 0/14 V
5	1 PhotoMOS [®] relay ^c
	(6) Option 4^b (only for types 702112, 702113, 702114)
0	Not used
1	1 relay (N/O contact)
2	1 logic output 0/14 V
5	1 PhotoMOS [®] relay ^c
6	1 relay (N/O contact) with longer contact life
